BEFORE YOU PRINT

Your files

200 RGB/sRGB JPG exports, 3000 × 3000 pixels, with 300 DPI metadata. The circular artwork is flattened onto an ivory square background; it is not a transparent PNG or an SVG.

Size to your own blank

Match the outer circle, not simply the square canvas width, to your blank or supplier template. Adjust bleed and positioning for your own process. Print a plain-paper test before final production.

Color and production

Follow your equipment, ink, transfer and blank supplier settings. Mirror only when your process requires it. No physical print or sublimation test was performed during file preparation.

Usage

The included terms allow personal projects and physical products for sale. Digital file resale, sharing and redistribution are not permitted. No exclusivity is promised. Read License.txt before use.

Decorative interpretation

These AI-generated artworks are stylized interpretations, not exact architectural surveys or historically verified reconstructions. No affiliation with depicted sites is implied.
